## DESCRIPCION SERIE AE9081: CORREDERA PERIM. R.P.T.

Serie corredera dotada de Rotura de Puente Térmico diseñada para conseguir un cambio en la estética de la ventana, donde los cortes a 45° y las formas redondeadas dan mayor presencia al conjunto.

**MARCO:** Está constituido por dos o tres perfiles tubulares unidos por dos barretas aislantes, que hacen un total de 60 mm. o 85 mm de anchura para 2 raíles y 125.5 mm. para 3 raíles, y que lleva incorporados alojamientos para el clipaje de tapajuntas.

La evacuación del agua de infiltración hacia el exterior se realiza a través de unas ranuras cubiertas con deflectores de clapeta.

**HOJA:** Constituida por dos perfiles unidos por dos barretas aislantes que hacen un total de 32.1 mm de anchura y con una altura de 76 mm, tanto en la parte superior e inferior como en los laterales. La hoja central está compuesta por el perfil de hoja y un perfil de cruce que se une a ella mediante un elemento aislante, todo ello atornillado.

La estanqueidad con el marco se realiza mediante juntas fin-seal en toda la periferia de la hoja y cortavientos en los marcos superior e inferior.

**ENSAMBLAJES:** Los ensamblajes se realizan tanto en marco como en hoja por cortes a 45° debidamente mecanizados y unidos mediante escuadras de tensor. En la hoja es recomendable colocar escuadras de alineación. El mecanizado del perfil de cruce se oculta con tapes de plástico.

Las uniones con travesaños se realizan con tornillos.

**HERRAJES:** Las ruedas son de material plástico con rodamientos de agujas sobre ejes de acero inoxidable. Se pueden colocar tanto ruedas simples como tandem siendo regulables o no según el caso. Los cierres son embutidos de aluminio extruído con cierre lateral sobre un gancho.

Las aperturas posibles en esta serie son:

- Correderas horizontales de 2, 3, 4 o más hojas.
- Marcos fijos.
- Conjuntos de ventanas con fijos adyacentes.

**ACRISTALAMIENTO:** Se efectúa mediante juntas de EPDM de cuña con vidrio alojado entre ellas.

Los espesores de acristalamiento posibles van desde 10 a 26 mm en total, dependiendo de la hoja utilizada.

## DESCRIPCION SERIE AE9081 MINIMALISTA : CORREDERA R.P.T.

Serie corredera dotada de Rotura de Puente Térmico diseñada para conseguir un cambio en la estética de la ventana, donde el cruce central únicamente tiene 30mm. de aluminio visto.

**MARCO:** Está constituido por dos o tres perfiles tubulares unidos por dos barretas aislantes, que hacen un total de 60 mm. o 73 mm de anchura para 2 raíles y 113,7 mm. para 3 raíles.

La evacuación del agua de infiltración hacia el exterior se realiza a través de unas ranuras cubiertas con deflectores de clapeta.

**HOJA:** Dependiendo de la opción escogida, estará constituida por distintos perfiles:

- Perimetral – corte recto: formada por dos perfiles unidos por dos barretas aislantes que hacen un total de 35,1mm. de anchura y con una altura de 76 mm. tanto en la parte superior e inferior como en un lateral. La hoja central está compuesta por un perfil de cruce atornillado con una poliamida. El encuentro entre la hoja y la hoja de cruce es en corte recto con una pieza especialmente diseñada para ello
- Corte recto: hoja horizontal compuesta por dos barretas, (con la opción de que una de ellas vaya con canal de atornillado), con una anchura de 35,1 mm. Va encastrada por un lado en una hoja lateral de 39,1mm. constituida por dos perfiles unidos por dos barretas aislantes, y por el otro lado con el perfil de cruce (que puede ser reforzado), consistente en un perfil tubular de aluminio con una poliamida a tornillada. con 30 mm. de sección vista.,

La estanqueidad con el marco se realiza mediante juntas fin-seal en toda la periferia de la hoja y cortavientos en los marcos superior e inferior.

**HERRAJES:** Las ruedas son de material plástico con rodamientos de agujas sobre ejes de acero inoxidable. Se pueden colocar tanto ruedas simples como tandem siendo regulables o no según el caso. Los cierres son embutidos de aluminio extruido con cierre lateral sobre un gancho.

Las aperturas posibles en esta serie son:

- Correderas horizontales de 2, 3, 4 o más hojas.
- Conjuntos de ventanas con fijos adyacentes.

**ACRISTALAMIENTO:** Se efectúa mediante juntas de EPDM de cuña con vidrio alojado entre ellas.

Los espesores de acristalamiento posibles van desde 16 a 28 mm.
